

75/2013 - 16 May 2013

April 2013

Euro area annual inflation down to 1.2%

EU down to 1.4%

Euro area¹ annual inflation was 1.2% in April 2013², down from 1.7% in March. A year earlier the rate was 2.6%. Monthly inflation was -0.1% in April 2013.

European Union³ annual inflation was 1.4% in April 2013, down from 1.9% in March. A year earlier the rate was 2.7%. Monthly inflation was 0.0% in April 2013.

These figures come from **Eurostat, the statistical office of the European Union**.

In April 2013, the lowest annual rates were observed in **Greece** (-0.6%), **Latvia** (-0.4%) and **Sweden** (0.0%), and the highest in **Romania** (4.4%), **Estonia** (3.4%) and the **Netherlands** (2.8%). Compared with March 2013, annual inflation fell in twenty-four Member States, remained stable in one and rose in one. The lowest 12-month average rates up to April 2013 were registered in **Greece** (0.4%), **Sweden** (0.8%) and **Latvia** (1.3%), and the highest in **Hungary** (4.6%), **Romania** (4.1%) and **Estonia** (4.0%).

The largest upward impacts to **euro area** annual inflation came from electricity (+0.11 percentage points), meat and fruit (+0.07 each), while fuels for transport (-0.32), telecommunications (-0.19) and package holidays (-0.11) had the biggest downward impacts.

Annual inflation (%) in April 2013, in ascending order*

* Data for Austria are provisional. Data for the United Kingdom are for March 2013.

p = provisional

1. The euro area inflation is measured by the Monetary Union Index of Consumer Prices (MUICP) as defined in Council Regulation (EC) No 2494/95 of 23 October 1995. The data refers to the euro area country composition at a specific point in time. New Member States are integrated into the MUICP using a chain index formula.
2. The euro area flash estimate for April 2013, published on 30 April 2013, was 1.2%.
3. The European Union (EU) inflation is measured by the European Index of Consumer Prices (EICP) as defined in Council Regulation (EC) No 2494/95 of 23 October 1995. The data refers to the EU country composition at a specific point in time. New Member States are integrated into the MUICP using a chain index formula.
4. An *annual rate* measures the price change between a month and the same month of the previous year. A *12-month average rate* compares the average Harmonised Indices of Consumer Prices (HICPs) of the latest 12 months to the average of the preceding 12 months. A *monthly rate* compares price levels between the two latest months.
5. Data for the United Kingdom for April 2013 were not available in time for publication. Due to this fact the EU totals have been calculated using Eurostat estimates.
6. An *impact* is a measure showing the change in the inflation due to the inclusion of a sub-index. The impact takes account of both the weight and whether the inflation for that sub-index is higher or lower than the all-items inflation rate.

More information can be found in the [HICP](#) dedicated section on Eurostat's website and in the Statistics Explained article on the [inflation in the euro area](#).
