

**MONTHLY ECONOMIC SURVEY
November 2013**

Private consumption and investment recover again in October. Nominal exports and imports decelerate.

In October, the economic sentiment and the consumer confidence indicators for the Euro Area (EA) recovered. In the same month, the raw materials and oil prices presented monthly change rates of -1.3% and 0.6% (-0.1% and -4.3% in October), respectively.

In Portugal, the economic climate indicator maintained in November the upward movement observed since the beginning of the year, after attaining the minimum of the series in December 2012, recording the highest value since March 2011. The economic activity indicator accelerated in October, registering the maximum since April 2011. Information from Short-Term Statistics revealed a year-on-year growth of the industrial production and a reduction of the economic activity in services and in construction and public works. The private consumption indicator recovered in October, due to the more significant positive contribution of both components, durable and non-durable consumption. The Gross Fixed Capital Formation (GFCF) indicator recorded a slightly less intense year-on-year decrease, reflecting the evolution of the machinery and equipment component. Concerning the international trade of goods, in nominal terms, exports and imports registered year-on-year change rates of 4.6% and 1.2% in October (5.8% and 3.5% in the previous month), respectively.

The 12-month average rate of the Consumer Price Index (CPI) was 0.4% in November (0.6% in October). The 12-month average rate of the Harmonized Index of Consumer Prices (HICP) decreased to 0.6% (0.8% in the previous month). The differential between the Portuguese HICP and the EA HICP year-on-year change rates was -0.9 percentage points (p.p.) in November (-0.8 p.p. in the previous month).

Economic Synthesis Indicators

Based on information available up to December 17, 2013.

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
