

91/2014 - 16 June 2014

May 2014

Euro area annual inflation down to 0.5%

EU down to 0.6%

Euro area¹ annual inflation was 0.5% in May 2014², down from 0.7% in April. A year earlier the rate was 1.4%. Monthly inflation was -0.1% in May 2014.

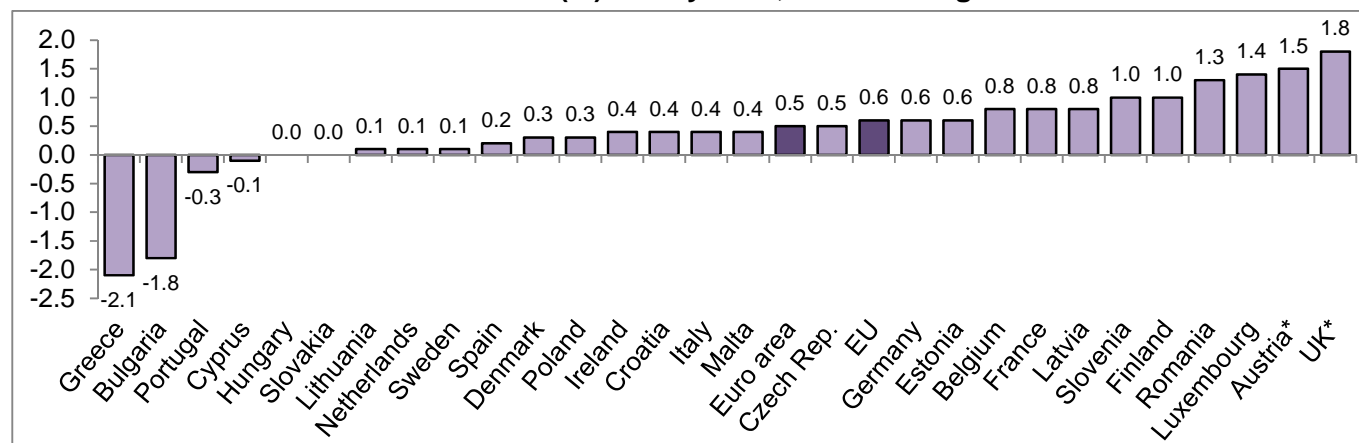

European Union³ annual inflation was 0.6% in May 2014, down from 0.8% in April. A year earlier the rate was 1.6%. Monthly inflation was -0.1% in May 2014.

These figures come from **Eurostat, the statistical office of the European Union**.

In May 2014, negative annual rates were observed in **Greece** (-2.1%), **Bulgaria** (-1.8%), **Portugal** (-0.3%) and **Cyprus** (-0.1%). The highest annual rates were recorded in **Austria** (1.5%), **Luxembourg** (1.4%) and **Romania** (1.3%). Compared with April 2014, annual inflation fell in sixteen Member States, remained stable in four and rose in seven.

The largest upward impacts to **euro area** annual inflation came from tobacco and restaurants & cafés (+0.08 percentage points each) and electricity (+0.07 pp), while vegetables (-0.13 pp), telecommunications (-0.11 pp) and fruit (-0.07 pp) had the biggest downward impacts.

Annual inflation (%) in May 2014, in ascending order

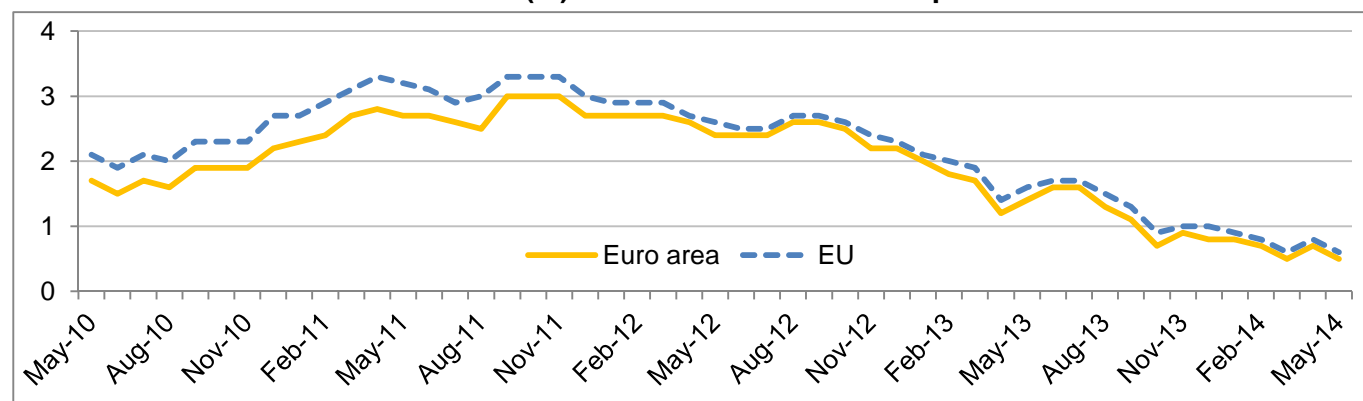

* Data for Austria are provisional. Data for the United Kingdom are for April 2014.

p = provisional

1. The euro area inflation is measured by the Monetary Union Index of Consumer Prices (MUICP) as defined in Council Regulation (EC) No 2494/95 of 23 October 1995. The data refers to the euro area country composition at a specific point in time. New Member States are integrated into the MUICP using a chain index formula.
2. The euro area flash estimate for May 2014, published on 3 June 2014, was 0.5%.
3. The European Union (EU) inflation is measured by the European Index of Consumer Prices (EICP) as defined in Council Regulation (EC) No 2494/95 of 23 October 1995. The data refers to the EU country composition at a specific point in time. New Member States are integrated into the EICP using a chain index formula.
4. An *annual rate* measures the price change between a month and the same month of the previous year. A *12-month average rate* compares the average Harmonised Indices of Consumer Prices (HICPs) of the latest 12 months to the average of the preceding 12 months. A *monthly rate* compares price levels between the two latest months.
5. Data for the United Kingdom for May 2014 were not available in time for publication. Due to this fact the EU totals have been calculated using Eurostat estimates.
6. An *impact* is a measure showing the change in the inflation due to the inclusion of a sub-index. The impact takes account of both the weight and whether the inflation for that sub-index is higher or lower than the all-items inflation rate.

More information can be found in the [HICP](#) dedicated section on Eurostat's website and in the Statistics Explained article on the [inflation in the euro area](#).
